Summary:

Highly skilled IT professional SDET with 3+ years of experience in manual and automation testing of web applications across AI-based analytics and Fintech domains. Strong expertise in functional, regression, API, and performance testing with hands-on automation experience using Selenium and Playwright (Python). Proven ability to collaborate with cross-functional teams, improve test coverage, and ensure high-quality releases under tight timelines. Proven competency in Project Management, Tracking, and Quality Assurance, developed projects using agile methodologies. Effective problem-solving abilities, including innovative and systematic approaches to design and debugging issues, backed up by the enthusiasm to learn technologies.

Education

Sagar Institute of Science and Technology (Bhopal). **Jun 2019 - June 2023**

B. Tech | Computer Science and Engineering | 8.32 CGPA

Experince

Software Development Engineer in Test (SDET).

Corecard India Pvt.Ltd, Bhopal**-(Aug 2022 – Present)**.

- Worked under an Agile environment with frequently changing requirements
- Worked with the CoreCard product team in the fintech / payments domain.
- Took ownership and developed automation test scripts for assigned features using an in-house automation framework based on **Selenium, TestNG, Cypress**, and other automation and internal development tools.
- Actively involved in designing and developing an AI-assisted test management and automation log reconciliation tool to analyze execution results, identify failures, classify automation issues vs application issues, and improve overall test efficiency.
- Reviewed test plans, test cases, and automation coverage for multiple features and releases.
- Implemented **Page Object Model (POM)** for maintainable test design.
- Automated end-to-end user flows and regression scenarios.
- Performed basic **API validation alongside UI tests**.
- Used Git for version control and gained exposure to CI concepts.
- Acquired strong feature-level domain knowledge and executed validations for Credit Card Authorization, ISO message processing, Loyalty & Rewards programs, ACH transactions, and Interest calculation, ensuring end-to-end accuracy and compliance.
- Effectively handled on-call activities, including resolving version set issues, pipeline block issues, and supporting release activities.

Skills

- **Test Automation Tools & Frameworks:** Selenium WebDriver**,** Playwright, Pytest, Cypress, Rest Assured, WebDriverIO, TestNG, Robot Framework.
- **API Data & Service Testing:** Rest Assured, Postman, Swagger, Soap UI, Karate Framework, JSON / XML Payload Validation.
- **Programming & Scripting Languages:** Java (Core Java, OOP, Data Structures), JavaScript, Python, SQL.
- **BDD / TDD & Test Frameworks:** Cucumber (BDD), Gherkin, Page Object Model (POM).
- **Testing Types and Methodologies:** Functional, Regression, Re-Testing, Load, Exploratory, Risk-Based Testing, Release Management Testing, Test Planning & Test Strategy, Agile (Scrum / Kanban).
- **Test Management, Defect Tracking & Reporting:** JIRA, Bug Reporting & Root Cause Analysis.
- **Network, Debugging & Monitoring Tools:** Charles Proxy, Fiddler, API Request/Response Debugging, Log Analysis.
- **Version Control:** Git, SVN
- **AI-Driven Testing & GenAI Tools:** Claude, GenAI-assisted Test Case Generation, GitHub Copilot.
- **Database:** SQL server.

Projects

Credit Processing Platform (Corecredit V2)

Roles and Responsibilities:

- Created and maintained automated regression suites and backend validations to ensure scalability and reliability of transaction workflows.
- Designed and executed **functional, regression, and re-testing** test cases across multiple releases.
- Completed **API testing** using Postman to validate backend responses and integrations.
- Validated data accuracy and recommendation outputs using **SQL queries**.
- Automated critical regression scenarios using **Selenium WebDriver with Python and Pytest**, improving regression efficiency.
- Conducted **performance and load testing** using JMeter to identify system bottlenecks.
- Logged, tracked, and verified defects using **Jira**, working closely with developers to ensure timely resolution.
- Actively participated in **SDLC discussions**, clarifying requirements and identifying edge cases early.
- Created and maintained QA documentation including test cases, execution reports, and defect summaries.
- Designed and executed **end-to-end test cases** for user-facing features such as Credit Card Authorization, ISO message processing, Loyalty & Rewards programs, ACH transactions, and Interest calculation, ensuring end-to-end accuracy and compliance.
- Prepared test execution reports and communicated quality status to stakeholders

AI-Powered Test Script Generation Engine using LLM.

Roles and Responsibilities:

- Developed an AI-driven engine using Ollama LLM to auto-generate PyTest scripts from natural language test scenarios.
- As a QA Automation Engineer, I developed this project to address the challenges of manual test case scripting and the time-consuming nature of regression test creation. The goal was to leverage Large Language Models LLMs) to automatically generate PyTest scripts from natural language testing scenarios, improving productivity and consistency across automation workflows.
- Created a dataset by scraping web applications to help the model identify and map UI elements automatically.
- Reduced test case development time by 60% and increased regression suite scalability.
